BACHELOR'S THESIS MEDIA ENGINEERING PROGRAM (IM)

Guide for companies and institutions
2026-2027

WHAT IS A BACHELOR'S THESIS (TB)?

This is a final project carried out in collaboration with a company on the topic of digital communication. It aims to consolidate the practical application of the skills acquired during the program by immersing students, autonomously, in a professional context.

THE PROJECT RUNS FOR 14 WEEKS.

Pre-study: 4 weeks

- Analysis of the client's request
- Research and problem identification
- Project management, planning, risks

Development and production: 10 weeks

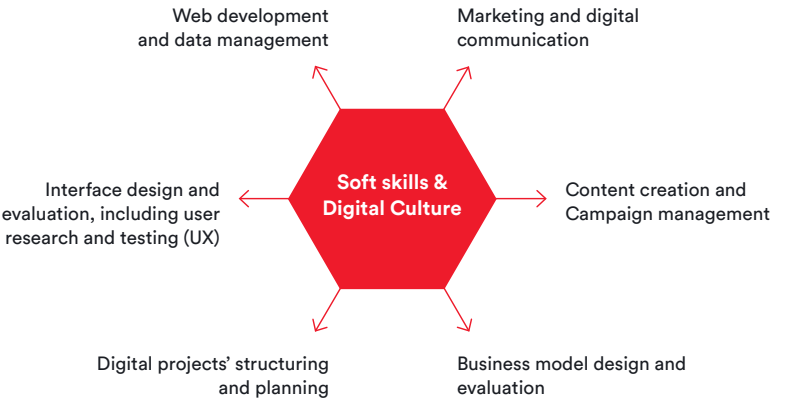

- Design of the proposed solution
- Practical implementation
- Communication: report and oral defense

EXAMPLES

- Redesign of a customer area for a major French-speaking Swiss group
- Gamification of a financial application for an online bank
- Audit and redesign of a French-speaking Swiss e-commerce site
- Development of an application for evaluating public transport journeys
- Design of digital communication for a sports brand
- Development of an application to raise awareness of endangered environments
- Implementation of a CRM system for a growing startup
- VR application demonstrating a new 3D creation device
- Design of a practical guide for associations in French-speaking Switzerland
- Prospective design of an application to improve health in sedentary work
- Redesign of a medical application used in the field by an NGO
- Development of a chatbot for an NGO

WHAT MAKES A GOOD TB TOPIC?

A good subject is a complex digital communication need that requires an exploratory phase of research and analysis before designing and prototyping a solution. Complexity is defined by the need to activate several media engineering skills to meet the need expressed by the company or institution:

EXAMPLES OF DELIVERABLES

- Development of web and mobile solutions;
- Design and creation of prototypes and proof of concept;
- Strategic analysis and benchmarking;
- Digital communication and marketing strategy;
- Organizational audit and technical monitoring (testing of tools or solutions);
- User testing and ergonomic analysis;
- Analysis and design of user experiences: UX/UI
- Cross-media content production;
- Serious games and gamification of a service or product;
- Selection and implementation of management tools (CRM, databases, chatbots, etc.);
- Drafting of internal or external best practice guides (offline and online).

TERMS OF COLLABORATION

COMPENSATION

No remuneration is required. The TB is an integral part of the teaching program. The company may decide to grant the student an allowance if it wishes, to cover transportation and meal expenses.

AUTONOMY

Students work autonomously: they propose and negotiate a schedule, deliverables, and monitoring procedures.

CONFIDENTIALITY AND INTELLECTUAL PROPERTY

In most cases, the results of the TBs are published and freely accessible. However, the company may request that they remain wholly or partially confidential. In this case, only the title and summary are published. Any intellectual property issues will be resolved on a case-by-case basis in agreement with the company.

WHAT ARE MY COMMITMENTS?

ACADEMIC DIMENSION

The company is committed to respecting academic freedom: the university approves the topic and evaluates the results. There is no guarantee as to the quality of these results.

SUPERVISION AND WORKPLACE

The company appoints a representative who acts as a point of contact for the student throughout the process. To promote synergies, the company welcomes the student to its premises. We recommend a minimum of 80% on-site presence, with the possibility of up to 20% remote work.

OVERALL PROCESS

OCTOBER TO JANUARY

Topic definition

Companies describe the topics, context, and nature of the subject they would like a student to explore.

FEBRUARY TO MARCH

Student-Company match

The relationship between the company and the student is established and the topic of the thesis is approved. A supervising teacher is appointed.

APRIL TO AUGUST

Pre-study and Bachelor's thesis development

The first four weeks are dedicated to preliminary research. This results in a detailed description of the TB, which is presented to school representatives for approval. The following ten weeks are devoted to carrying out and communicating the project. Two interim reviews with stakeholders ensure that the project is running smoothly. Students submit a TB report at the end of the ten weeks.

SEPTEMBER

Oral defense

Students present their final projects to a panel consisting of a supervising teacher and an expert appointed by the school.

WHAT ARE MY KEY BENEFITS AS A CLIENT?

NEW RESOURCES

You benefit from a skilled and motivated collaborator for an effective period of 14 weeks. You can develop a project without waiting for internal resources to become available and enjoy actionable results. You can explore and evaluate digital communication components for which you do not have the skills or resources available.

FUTURE EMPLOYEES

You will discover professional profiles and actively contribute to a training program that is unique in French-speaking Switzerland. You will evaluate skills and attitudes without obligation, which will be a potential source of new competencies for your organization.

OPEN TO EVERY KIND OF ORGANIZATION

The TB is open to all legal forms of organization, private or public, commercial or non-commercial, associations, foundations, state institutions, NGOs, federations, and cooperatives. Only sole proprietorships are not eligible.

ORGANIZATIONS THAT HAVE BENEFITED FROM A BACHELOR'S THESIS:

logitech · LE CENTRE D'ETUDES OLYMPIQUES · Swissquote · RTS Radio Télévision Suisse

NESPRESSO · vaudoise · boschung · zühlke empowering ideas

eeproperty · kentoo · ARSENIC · NIDECKER
